

Ishan Saini

+91 [8968678456](tel:8968678456) | ishan.saini880@gmail.com | [LinkedIn](#) | [GitHub](#)

Technical Skills

Languages: Go, Bash, Java

Tools: Kubernetes, Docker, Terraform, GitHub, Helm, GraphQL, gRPC, Apache Kafka, Postman

Databases: MySQL, PostgreSQL, Redis, MongoDB

Projects

Distributed Microservices Architecture([GitHub](#))

Tech: Go • gRPC • GraphQL • Docker • PostgreSQL • Elasticsearch

- Architected a 3-service microservices system (Account, Catalog, Order) using gRPC and Protocol Buffers for inter-service communication.
- Built a GraphQL API Gateway aggregating downstream services into a unified entry point.
- Implemented a database-per-service PostgreSQL for transactions, Elasticsearch for search.
- Containerized and orchestrated services using Docker Compose.

Scalable REST API Architecture ([GitHub](#))

Tech: Go • Fiber • PostgreSQL • GORM • Docker • godotenv

- Designed a modular REST API in Go using Fiber, separating routing, handlers, models, and storage layers for clean architecture and maintainability.
- Implemented PostgreSQL integration using GORM with automated schema migrations and structured repository pattern for database operations.
- Standardized JSON response handling with centralized success/error utilities and containerized the service for reproducible deployment.

Custom Load Balancer ([GitHub](#))

Tech: Go • net/http • Reverse Proxy • Round Robin Algorithm.

- Designed and implemented a custom HTTP load balancer from scratch in Go.
- Engineered request routing abstraction to decouple proxy logic from backend servers.
- Forwarded client requests dynamically maintaining abstraction between proxy and backend.

Experience

Open Source Contributor

Kagent [kagent-dev/website](#), [kagent-dev/kagent](#)

- Converted Kubernetes Custom Resource Definitions (CRDs) into structured MDX documentation, improving developer onboarding and API clarity.

Education

Thapar Institute of Engineering & Technology, Patiala

B.E. in Computer Science & Business Systems

2026
